

Jiangxi Hospital

Founded in 2011, the Jiangxi Hospital of Heat-Sensitive Moxibustion is a branch of the First Affiliated Hospital of Jiangxi University of TCM (3-A). It is the only large specialised hospital of acupuncture in Jiangxi province, and the only specialised hospital of moxibustion in China.

Updated with the advanced theories of modern medicine, the hospital is always focusing on inheriting and developing the TCM culture. It promotes the endogenous medicine, which means curing diseases safely and without side-effects by fully activating the medical potential of human bodies.

The hospital is a home to the national key clinical disciplines and the key disciplines of the State Administration of Traditional Chinese Medicine. It has hosted the research programs of the State 973 Project (a national key development project for basic research), research programs financed by the National Natural Sciences Foundation, support programs for the 11th Five-Year Plan of the state, and Science and Technology Breakthrough Project of the Science and Technology Department of Jiangxi Province.

The hospital develops over 50 kinds of therapeutic techniques including heat-sensitive moxibustion, needling, cupping, three-edged needle, acupotomy, scalp acupuncture, auricular acupuncture, vertebra acupuncture, electroacupuncture, catgut embedment at acupoint, acupoint injection, acupoint application, chiropractic, physical therapy (treatment by using infrared ray, millimeter wave, ultrashort wave, intermediate frequency, etc.), and rehabilitation therapy such as exercise therapy, occupational therapy, speech therapy and swallowing therapy.

Among those techniques, the heat-sensitive moxibustion is an original technique of the hospital with independent intellectual property. As a national and international leader in this field, it has attained a Jiangxi Provincial Science and Technology Progress Award (I) in 2007 and a Science and Technology Award (II) from China Association of Acupuncture&Moxibustion in 2008. And in 2013, the program—The Infrared Detecting Technology on Heat-sensitised Acupoint and its Clinical Application—has attained a Jiangxi Provincial Science and Technology Progress Award (I). On September 29, 2010, an event was held at the Devnet pavilion (an executive body of UNDP) of Shanghai World Expo—The Inauguration of the First Zhonghua Moxibustion Day& the Global Official Launch of Zhonghua Moxibustion. And the heat-sensitive moxibustion has become a key project of UNDP.

With the principle of "people-oriented, sincere and caring", the hospital is dedicated to offering qualified medical services to the public. And it has many original techniques in treating ischemic stroke, facial paralysis, migraine, occipital neuralgia, postherpetic neuralgia, allergic rhinitis, bronchial asthma, functional dyspepsia, irritable bowel syndrome, senile constipation, chronic prostatitis, primary dysmenorrhea, chronic pelvic inflammation, knee osteoarthritis, cervical spondylosis, lumbar disc herniation, periartthritis humeroscapularis and myofascial pain syndromes.

Chen Rixin, born in November 1956, chief physician of TCM, professor, doctoral supervisor, acupuncture & moxibustion expert, enjoys the special allowance of the State Council. He has been engaged in the inheritance and innovation of moxibustion for ages, putting forward the "acupoint sensitisation theory", founding the "heat-sensitive moxibustion therapy", and substantially enhancing the clinical efficacy of moxibustion. This new technology has been put into use in 27 provinces and autonomous regions in China, initially shaping the pattern of "northern Tianjin is known for acupuncture, southern Jiangxi is known for moxibustion". Professor Chen is proficient in applying heat-sensitive moxibustion therapy to various diseases like stroke(cerebral infarction),arthralgia(cervical vertebra disease),lumbago disease (lumbar disc herniation), facial paralysis (facial neuritis), knee arthralgia disease (osteoarthritis of the knee) and other clinical difficult diseases, achieving favourable effects.

Chen Ming Ren, born in September 1960, Jiangxi Nanchang people, Master of Medicine, Professor, director of Chinese medicine practitioners. He is currently the vice president of Jiangxi College of TCM, Jiangxi College of TCM Hospital, vice president of Chinese Medicine Association, Jiangxi Province, vice president of Integrative Medicine.

In recent years, he has undertaken the research work of the Natural Science Foundation of Jiangxi Province. He has published one monograph and 1 editor in chief. He has published more than 10 papers in the national core journals. One of them has been awarded the "Chinese Medicine Association" Application and Academic Research Paper Award "second prize.
